

Project: Chemical Containment Area

The Problem

Phosphoric acid spills damaged this containment area.

RPT and Thortex were called in to repair the damaged areas and apply a protective coating.

The Solution

RPT prepared the damaged surfaces of the containment area and rebuilt the spalled concrete with **Thortex Floor Tech RS**.

Two coats of **Thortex Chemi Tech CR** were then applied to protect the concrete from damage by the chemicals.

Thortex Floor-Tech RS is a high-performance, solvent-free, epoxy resurfacing screed designed for use on concrete floors subject to abrasion and chemical attack.

Thortex Chemi-Tech CR is a high-performance, solvent-free, epoxy coating that is specifically designed for environments where exceptional chemical and corrosion resistance are needed.
