

Profile: Concrete Repairs

The Problem

This was part of a chemical company where spillages of chemicals were causing damage to the concrete surfaces.

The concrete was becoming very badly damaged and without protection would soon become completely unacceptable therefore creating a health and safety hazard.

The Solution

All loose, damaged and contaminated concrete was removed. **Thortex Floor-Tech SP Primer** followed by **Thortex Floor-Tech RS** were then applied. **Thortex Chemi-Tech CR** was applied to the entire area to provide additional protection.

Thortex Floor-Tech SP Primer is a high-performance, low viscosity, solvent-free, conductive coating designed for use as a primer in conjunction with anti-static floor systems.

Thortex Floor-Tech RS is a high-performance resurfacing screed designed for concrete floors subject to abrasion and chemical attack

Thortex Chemi-Tech CR is a high-performance, solvent-free lining system with excellent resistance to erosion and corrosion.
