

PROJECT PROFILE

PROJECT: Grip-Tech Application—Slip Deterrent Step Tread

THE PROBLEM

A large hotel in Washington, DC has marble steps throughout the complex. Some of these are located beside water fountains.

The maintenance staff tried everything from paint to adhesive strips to provide a non-slip area on the step tread. None of their solutions withstood the conditions.

THE SOLUTION

Our Thortex Contracting Team thoroughly cleaned and degreased the steps and taped-off an area on each tread.

Grip-Tech normally does not require a primer but because the marble had a slight glaze and is so dense, we selected Uni-Tech GP Primer to provide a bond.

THE SOLUTION

Thortex Grip-Tech was applied, W.D. Grip broadcast in the Grip-Tech, then a light brushing while the product was still wet and well within the pot-life, ensured the W.D. Grip was fully encapsulated.

The Grip-Tech system offers a superb slip deterrent surface and provides a quick solution for both indoor and outdoor safety surfacing.

Grip-Tech is available in OSHA colors and can be applied over a whole area or to form patterns including stripes, chevrons, and squares.

Grip-Tech has USDA/FDA approval.
