

## PROJECT PROFILE

**PROJECT:** International Pharmaceutical Company

### THE PROBLEM

The floor of this “high bay, narrow isle” warehouse owned by an international pharmaceutical company was in need of refurbishment. The company requested that Thortex provide a completely level floor surface, as its precision forklift trucks use a wire guidance system.

Company managers were also aware that Thortex products are ideal for use in areas where hygiene is essential.

### THE SOLUTION

The floor was re-leveled and then grinding equipment was used to prepare the surface. The surface was primed with Floor-Tech SP Primer and then Floor-Tech XSL was used for the aisles. Floor-Tech HB in the same color was used under the racks. Once the floor had fully cured, the wire guidance tracks were cut into the floor.

Other areas within this tablet manufacturing plant including Plant & Chiller rooms, were also coated using Floor-Tech HB.

The application of the Floor-Tech XSL and Floor-Tech HB was carried out by one of our authorized applicators.
