

PROJECT PROFILE

PROJECT: Power Generation Station

THE PROBLEM

Thortex was approached to provide a suitable high build coating for a floor area at this Power Generation Station which had been re-laid with concrete.

As Thortex boasts extensive experience in applications within the power generation industry, we were only too happy to offer a complete refurbishment solution.

THE SOLUTION

After all surface laitence had been removed from the new concrete by mechanical means and resultant dust and debris removed, the substrate was primed with Uni-Tech GP Primer. Two coats of our solvent-free, polyurethane, high build coating Floor-Tech FB were then applied.

Based on a unique resin system reinforced with ceramics, Floor-Tech FB provides outstanding abrasion, impact and chemical resistance as well as a high degree of flexibility.
