

Project: Waste Water Tanks

The Problem

This WWTP settling tank needed to be refurbished and protected with the appropriate coating system to ensure its structural integrity wasn't compromised.

The Solution

After cleaning the substrate to prepare it to accept the products, **Thortex Floor-Tech RS** was used to rebuild the spalled and broken areas.

Thortex Chemi-Tech EP was then applied to protect the substrate from the harsh environment to which it was exposed.

Thortex Floor-Tech RS is a unique re-surfacing system which provides excellent long-term protection even in the most aggressive environments.

Thortex Chemi-Tech EP is a two component, solvent-free, epoxy coating designed for use as an economical, heavy duty, chemical resistant lining system for concrete and metal structures. It offers a high degree of resistance to attack by aqueous chemicals and is ideal for tanks, containment dykes, and sewage treatment equipment.
