

Project: Waste Water Treatment Plant Containment Area

The Problem

Consistent exposure to **sodium hypochlorite** and heavy traffic caused serious disintegration and spalling of the concrete at this Waste Water Treatment Plant's containment area.

The Solution

RPT pressure washed the containment area, repaired the spalled concrete with **Thortex Floor-Tech RS** and then ground the concrete with diamond grinders.

Thortex Floor-Tech SP Primer was applied followed by a 20+ mil coat of **Thortex Chemi-Tech USR** which was installed by squeegee and roller. A coat of **Thortex Chemi-Tech EP** and **Thortex Grip-Tech** yellow were used as safety markings on the burms and ramps.

Thortex Chemi-Tech USR is a high-performance, solvent-free coating designed to be used where exceptional resistance to organic solvents is required.
