

Project: Tank Farm

The Problem

This tank farm was looking for a quick, economical way to improve the appearance of their tanks.

They called on RPT and Thortex to solve this problem.

The Solution

RPT pressure washed and hand tooled the tanks. They were patch primed with **Thortex Corro-Tech GP** followed by two coats of **Thortex Poly-Nox** to the entire surface. This has proven to be a safe and economic solution when abrasive blasting is out of the question.

Thortex Corro-Tech GP is a high-performance, anti-corrosive coating designed for use as a long-term protection system of new and existing steel structures where surface preparation is restricted.

Thortex Poly-Nox is a high-performance, acrylic coating that has excellent elastomeric and corrosion resistant properties with an optimum level of UV resistance, adhesion and durability for ferrous and cementitious surfaces.
