

Project: Containment Area – Thickening Polymers

The Problem

This WWTP needed a durable, hard-wearing, chemical-resistant coating for their polymer mixing areas.

RPT and Thortex were asked for a solution.

The Solution

RPT pressure washed and degreased the floor and trenches. A diamond grinder was then used on the whole floor surface to prepare it for the new system.

The concrete was primed with **Thortex Floor-Tech SP Primer** followed by two 20-mil coats of **Thortex Floor-Tech HB**.

Thortex Floor-Tech SP Primer is a high-performance, low-viscosity, solvent-free coating designed for use as a multipurpose floor sealing and priming system.

Thortex Floor-Tech HB is a high-performance, solvent-free, epoxy coating designed for an optimum level of adhesion, abrasion, impact and chemical resistance which provides excellent long-term protection to industrial floors operating in aggressive environments.
